National Semiconductor

DP7304B/DP8304B 8-Bit TRI-STATE® Bidirectional Transceiver (Non-Inverting)

General Description

The DP73048B/DP8304B are high speed Schottky 8-bit TRI-STATE bidirectional transceivers designed to provide bidirectional drive for bus oriented microprocessor and digital communications systems. They are all capable of sinking 16 mA on the A ports and 48 mA on the B ports (bus ports). PNP inputs for low input current and an increased output high (V$_{OH}$) level allow compatibility with MOS, CMOS, and other technologies that have a higher threshold and less drive capabilities. In addition, they all feature glitch-free power up/down on the B port preventing erroneous glitches on the system bus in power up or down.

DP7304B/DP8304B are featured with Transmit/$\overline{\text{Receive}}$ (T/$\overline{\text{R}}$) and Chip Disable (CD) inputs to simplify control logic.

Features

- 8-bit bidirectional data flow reduces system package count
- Bidirectional TRI-STATE inputs/outputs interface with bus oriented systems
- PNP inputs reduce input loading
- Output high voltage interfaces with TTL, MOS, and CMOS
- 48 mA/300 pF bus drive capability
- Pinouts simplify system interconnections
- Transmit/$\overline{\text{Receive}}$ and chip disable simplify control logic
- Compact 20-pin dual-in-line package
- Bus port glitch free power up/down

Absolute Maximum Ratings (Note 1)

If Military/Aerospace specified devices are required, contact the National Semiconductor Sales Office/Distributors for availability and specifications.

Supply Voltage	7V
Input Voltage	5.5V
Output Voltage	5.5V
Storage Temperature	−65°C to +150°C

Maximum Power Dissipation* at 25°C
Cavity Package	1667 mW
Molded Package	1832 mW
Lead Temperature (soldering, 4 sec.)	260°C

*Derate cavity package 11.1 mW/°C above 25°C; derate molded package 14.7 mW/°C above 25°C.

Recommended Operating Conditions

T-52-31

	Min	Max	Units
Supply Voltage (V_{CC})			
DP7304B	4.5	5.5	V
DP8304B	4.75	5.25	V
Temperature (T_A)			
DP7304B	−55	125	°C
DP8304B	0	70	°C

DC Electrical Characteristics (Notes 2 and 3)

Symbol	Parameter	Conditions			Min	Typ	Max	Units

Note 1: "Absolute Maximum Ratings" are those values beyond which the safety of the device cannot be guaranteed. They are not meant to imply that the devices should be operated at these limits. The tables of "Electrical Characteristics" provide conditions for actual device operation.

Note 2: Unless otherwise specified, min/max limits apply across the supply and temperature range listed in the table of Recommended Operating Conditions. All typical values given are for V_{CC} = 5V and T_A = 25°C.

Note 3: All currents into device pins are positive; all currents out of device pins are negative. All voltages are referenced to ground unless otherwise specified.

Note 4: Only one output at a time should be shorted.
